PREFACE

The EPA has focused most of its past efforts in the control of air toxics on the Clean Air Act (CAA) Section 112 National Emission Standards for Hazardous Air Pollutants (NESHAP) program. The Agency has undertaken measures that will accelerate the standards setting process in order to more rapidly reduce the risks resulting from exposure to air toxics. Yet there is still pressure for information and action on the control of air toxics being brought to bear by the public, who are concerned over continuing exposure to potentially toxic air pollutants. This public pressure has had an impact such that many State and local agencies have developed or are now actively developing regulatory programs that complement Federal activities.

In addition to accelerating Section 112 Federal standards setting, EPA is also supporting State and local air toxics control efforts. In response to State and local agency requests for assistance in information exchange, EPA has designed and is implementing an information dissemination center, known as the National Air Toxics Information Clearinghouse. It has been designed and is being implemented in close coordination with the State and Territorial Air Pollution Program Administrators (STAPPA) and the Association of Local Air Pollution Control Officials (ALAPCO).

The purpose of this document, published by the National Air Toxics Information Clearinghouse, is to inform State and local policy makers of current research and regulatory development projects underway at EPA and the National Institute of Occupational Safety and Health (NIOSH), and to help them identify sources of specific air toxics information. Every effort has been made to ensure accuracy as of March 1986, the date that compilation of information was completed. However, agency policies, priorities, and funding levels reflected by the projects listed in this document may change affecting estimated project completion dates and whether or not regulatory actions are finally taken.

ABSTRACT

The National Air Toxics Information Clearinghouse has been established by the EPA's Office of Air Quality Planning and Standards for the purpose of facilitating information transfer among Federal, State, and local air quality management agencies. This document has been published as part of that effort. The purpose is to inform State and local policy makers and other Clearinghouse users of EPA and NIOSH research and EPA regulatory development projects concerning noncriteria air pollutants.

The document is divided into three parts and an appendix. The first part lists 250 air toxics projects currently in progress at EPA and NIOSH. A brief description of each project and a contact name and office are given. The second part of the document contains the index that allows readers to locate projects of interest. Projects are indexed by project type, chemical name, CAS number, and air pollution source type. The third part lists other published sources of information on current Federal government toxics research. The appendix lists regulatory development projects on toxic chemicals underway at the EPA's Office of Drinking Water (ODW). While most of these projects are not directly related to air problems, health information on toxic chemicals from ODW projects may be of interest to Clearinghouse users.

This document was submitted in partial fulfillment of Contract No. 68-02-3889, Work Assignment No. 78, by Radian Corporation under the sponsorship of the U. S. Environmental Protection Agency. Compilation was completed in March 1986, and the report was completed in June 1986.

INTRODUCTION

This list of ongoing research and regulatory development activities has been compiled by the National Air Toxics Information Clearinghouse as one of several tools designed to facilitate information exchange on air toxics. A total of 250 ongoing projects concerning noncriteria pollutants which have been funded by the U. S. Environmental Protection Agency (EPA) and the National Institute for Occupational Safety and Health (NIOSH) are listed. The EPA or NIOSH office and a contact name are provided for each project. To facilitate use of this document, the projects are indexed by project type, chemical name, Chemical Abstracts Services (CAS) registry number, and air pollution source type.

This document is designed to help State and local agency Clearinghouse users identify sources of information for specific air toxics questions or problems. It is an updated version of the March 1985 Clearinghouse "Ongoing Research and Regulatory Development Projects" document. The list of projects contained in this document focuses on studies which have not yet resulted in publicly available reports. The list indicates when the work is scheduled for completion as well as a contact person who can provide study details. In future updates of this document, new projects will be added, and the dates and names previously provided will be updated as required. Projects which have been completed since the last edition have been removed. Some of these projects resulted in published reports which are listed in the July 1986 Clearinghouse publication "Bibliography of Selected Reports and Federal Register Notices Related to Air Toxics."

DOCUMENT SCOPE

Twelve types of projects which are considered to be of greatest interest to agencies concerned with the regulation of noncriteria air pollutants are included in this compilation. Both basic scientific research and studies conducted to assess the need for regulations and/or to support

regulations development have been included. Federal regulations may or may not be developed for sources and/or pollutants covered by these projects. The 12 categories of projects are briefly defined below.

1. CHIPs - Chemical Hazard Information Profiles - In these studies, EPA's Office of Toxic Substances (OTS) compiles preliminary information about sources, environmental distribution, exposure and health effects of specific chemicals.

2. Emission Factor Documents - Primarily funded by the Monitoring and Data Analysis Division, Office of Air Quality Planning and Standards (OAQPS), these projects examine the sources and emissions of specific pollutants.

3. Epidemiology - NIOSH-funded epidemiology studies on noncriteria air pollutants.

4. Exposure Assessments - EPA-funded projects to estimate the population exposed to ambient concentrations of specific chemicals.

5. Health Assessments - Projects funded by EPA's Office of Health and Environmental Assessment, Environmental Criteria and Assessment Office to compile information on health effects of specific chemicals.

6. Monitoring, Sampling, and Analysis - Projects funded by EPA laboratories to develop methodologies for monitoring and sampling hazardous air pollutants.

7. NESHAP - OAQPS projects to develop background information documents (BID) to support National Emission Standards for Hazardous Air Pollutants (NESHAP) under Section 112 of the Clean Air Act. These documents contain the following types of information: a description of the affected industry or air pollution source including emissions data and applicable control technology; an analysis of regulatory alternatives in terms of potential environmental, economic, and energy impacts; and a health appendix including an exposure assessment and a risk assessment.

8. NSPS - 111(d) - OAQPS projects to prepare background information documents to support new source performance standards (NSPS) for sources of certain hazardous air pollutants under Section 111(d) of the Clean Air Act. These documents include the following types of information: a description of the affected industry or air pollution source including emissions data and applicable control technology, and an analysis of regulatory alternatives in terms of potential environmental, economic, and energy impacts.

9. Pre-Regulatory Assessments - Projects funded by the Pollutant Assessment Branch of OAQPS which include reviewing the health effects, sources, emissions to the ambient air, and potential for public exposure to specific pollutants in order to decide whether these pollutants should be regulated under the Clean Air Act.

10. Risk Assessments - Projects funded by EPA's Office of Health and Environmental Assessment and EPA research laboratories to estimate human risks from hazardous air pollutants.

11. Source Assessments - EPA projects to identify and quantify emissions from specific source categories and to evaluate applicable control technologies.

12. Toxicology - Animal toxicology testing projects funded by EPA research laboratories and NIOSH.

The following EPA offices were contacted for lists of projects within these 12 categories:

- Office of Air Quality Planning and Standards,
- Office of Health and Environmental Assessment,
- Office of Pesticides and Toxic Substances,
- Office of Solid Waste and Emergency Response,
- Office of Research and Development, and
- Regional Offices for all 10 Regions.

The National Institute of Occupational Safety and Health (NIOSH) under the Department of Health and Human Services was also contacted. In selecting projects from these lists, emphasis was placed on projects dealing with noncriteria air pollutants which belong to the categories listed above. The Office of Drinking Water (ODW) projects have been listed in the Appendix. While not specifically air related, health information on toxic pollutants resulting from ODW projects may be helpful to Clearinghouse users.

Several compilations of ongoing research and regulatory development projects on potentially toxic chemicals (not necessarily air pollutants) have been identified in Part 3 of this document. These sources can be used to supplement this compilation.

USING THIS DOCUMENT

This document has been divided into three parts and an appendix. Part 1 contains individual entries for 250 ongoing research and regulatory development projects. The entries are listed by the organization conducting the work in the following order:

- EPA Offices,
- EPA Laboratories,
- EPA Regional Offices, and
- NIOSH.

Project entries are numbered sequentially throughout Part 1, beginning with the prefix CL-BIB. Each entry generally contains the following elements:

- Project Title,
- Status of Project,
- Contact Office and Name,
- Chemical Abstract Services (CAS) Registry Number,
- Chemical Name,
- Air Pollution Source, and
- Project Type.

CAS number, chemical name, and source may not be applicable to all entries. For example, projects which deal with groups of chemicals such as "organic compounds" or "heavy metals" rather than specific pollutants cannot be assigned CAS numbers. Several special Clearinghouse acronyms prefaced with "CL- " have been assigned to groups of common pollutant types where no CAS number was applicable. The list of Clearinghouse chemical acronyms is shown in Table 1. In a few cases, the term "various" has been used where pollutants that are emitted are so numerous that even Clearinghouse numbers could not be assigned. In some projects dealing with specific source categories, lists of chemicals emitted are not yet available, so "various" has been used under Chemical Name. Other chemical-specific projects may not deal with specific air pollution sources. In these cases, the Air Pollution Source element of the entry has been omitted. Wherever possible, an effort has been made to list the specific chemical name(s), CAS registry number(s), and/or source type(s) for each project. Table 2 gives examples of sample entries.

If a project clearly falls into 1 of the 12 categories listed above, only that one project type is listed in the entry. While there is often overlap between the kinds of information included in these categories, the project type identified reflects the primary emphasis of the project. Where it was difficult to select the single most appropriate project type, more than one is listed.

The Status of Project element contains the date the project is expected to be completed or published. The month and year is given if available, otherwise the fiscal year of expected completion is provided. Since most NIOSH projects are long term projects, journal articles on various phases of a project may be published before the overall project completion date shown in the entry. In the case of emission standards projects (NESHAPs and NSPS), the entry indicates whether the standard is currently in the proposal or promulgation stage, since separate background information documents are made publicly available after each stage.

The last element in each project entry lists the office doing the work and the name of the Project Officer or other knowledgeable contact. Abbreviations used for the offices and the telephone number for each office are included at the end of this introduction.

Part 2 of the document consists of the index. The index is organized alphabetically and each project is indexed by project type, CAS number, chemical name, source type, and the agency conducting the work. These indices allow users to locate projects pertaining to a specific chemical, source, or type of information. For example, if information is desired on a specific chemical, it can be obtained by looking up the chemical name in the index or by looking up the CAS Number for that chemical. Numerical entries are located after the alphabetic entries. Under the chemical name will be a list of titles and Bibliography numbers. Using this information one can look up the projects in Part 1 of this document. Similarly this process can be done for various source types. For example, if information on projects related to steel mining, or the chemical industry was desired, a listing could be found alphabetically in the index under each of these categories. If an entry contains more than one project type, it is listed in the index under each applicable project type. Only those chemical names, CAS numbers, and sources used in the 250 project descriptions are found in the index.

The final part of the document, Part 3, lists other published sources of information on ongoing air toxics research giving abstracts of these publications and ordering information. It was impossible to include all potentially useful toxicology projects in this report due to space limitations, however, the National Toxicology Program (NTP) publishes lists

of toxicology research projects underway at EPA, the Department of Health and Human Services, and the Department of Energy. The EPA Chemical Activities Status Report and the Manager's Guide to EPA Activities on Toxic and Hazardous Chemicals, also published periodically, list ongoing EPA projects on specific chemicals, including research and regulation under water, air, solid waste, and toxic substances legislation.

Regulatory development projects underway at the EPA Office of Drinking Water (ODW) are summarized in the Appendix. While these projects are not specifically air related, Clearinghouse users may find toxic chemical information generated by ODW useful. For example, background documents for setting Maximum Contaminant Levels under the Safe Drinking Water Act contain health information on toxic chemicals; and many chemicals being studied by ODW are also potential air pollutants. The Appendix contains a brief description of ODW regulatory development activities and lists of chemicals currently under study.

Available from: National Toxicology Program Public Information Office, MD B2-04, Post Office Box 12233, Research Triangle Park, North Carolina, 27709, (919) 541-3991.

Abstract: The National Toxicology Program (NTP) was established by the Department of Health and Human Services (DHHS) to coordinate and provide information about potentially toxic chemicals to regulatory and research agencies and to strengthen the science base in toxicology. The NTP includes relevant activities by DHHS agencies include the National Cancer Institute (NCI), the National Institute of Environmental Health Sciences (NIEHS), the Food and Drug Administration (FDA), and the National Institute for Occupational Safety and Health (NIOSH). The Annual Plan describes the NTP's completed, ongoing and planned activities in toxicology research and testing. An index of chemicals being studies is also included. NTP programs in the following categories are described: cellular and genetic toxicology, carcinogenesis testing, toxicologic characterization, benzidine-dye initiative, chemical disposition, chemical pathology, cutaneous toxicology, immunological testing, neurobehavioral toxicology, pulmonary toxicology, safety evaluations of orthophthalic acid esters and related compounds, and reproductive and developmental toxicology. Coordinative management activities are also described. These include: chemical nomination and selection, chemical and laboratory test management, chemistry resources, chemical repositories, laboratory animal resources, chemical health and safety, data management and analysis, information generation and dissemination, and the annual report on carcinogens.

2. National Toxicology Program Review of Current DHHS, DOE and EPA Research Related to Toxicology, Fiscal Year 1985.
Department of Health and Human Services.

Available from: National Toxicology Program Public Information Office, MD B2-04, Post Office Box 12233, Research Triangle Park, North Carolina, 27709, (919) 541-3991.

Abstract: The document reviews basic toxicology research, toxicology testing, and toxicology method development activities in progress at the Department of Health and Human Services (DHHS), the Department of Energy (DOE) and the Environmental Protection Agency (EPA). Summaries of the dollar and manpower support for agency activities in toxicology are included. A narrative of the roles of each agency in toxicology research is given, followed by listings of projects. The test method development section contains abbreviated summaries of each test method

development project, the performing organization and project number. The toxicology testing section lists information on each testing project including the chemical name, CAS number, type of study, status, performing organization and project number. The toxicology testing list is indexed in three ways: by chemical name, CAS number, and type of study.

Additional Information: Funding for updating the EPA Chemical Activities Status Report (EPACASR) ended in 1984. An updated edition of the data base described previously is available on tape which is current through August 1984. No hard copy of the data is available. Copies of the tape can be obtained through NTIS by requesting the "EPACASR Tapes" dated February 1985. Two companies with copies of the tapes provide on-line data base access services. Users may buy a subscription which allows them to access the data base on their own terminals through a modem, or they may hire one of the companies to do on-line searches and data retrieval at a per hour rate.

Available from: Chemical Coordination Staff, Office of Toxic Substances, Environmental Protection Agency, 401 M Street, S.W., Washington, D.C., 20460, (202) 475-6104.

Abstract: This report provides information on the status of EPA activities on toxic and hazardous chemicals. The report is limited to chemical-specific evaluation and regulatory activities under seven statutes: Clean Air Act; Clean Water Act; Safe Drinking Water Act; Superfund; the Resource Conservation and Recovery Act; Federal Insecticide, Fungicide and Rodenticide Act; and Toxic Substances Control Act. A tabular matrix is presented with the seven statutes along the horizontal axis, chemicals along the vertical axis, and project status in the cells of the matrix. The types of projects listed in the matrix include several kinds of regulatory assessments (such as health, risk, source, exposure and pre-regulatory assessments) as well as dates of proposal and final rulemakings under the seven statutes. Completed projects and current or planned activities scheduled to occur in fiscal years 1983 through 1985 are included. Depending on the statute under which a chemical is being evaluated or regulated, the projects listed may focus on air or water media or they may be multimedia projects. Indices which include a list of common chemical nomenclature synonyms are also provided in the back of the document. The information presented in this document is current as of June 1984.

APPENDIX
EPA OFFICE OF DRINKING WATER PROJECTS[1]

The EPA Office of Drinking Water (ODW) has studies underway on several potentially toxic chemicals as part of its regulatory development activities. Information on these projects has been included in the Air Toxics Information Clearinghouse ongoing research and regulatory development document because many toxic drinking water contaminants being studied by ODW are also potential air pollutants. Clearinghouse users may find health information generated by ODW projects useful. For further information on the projects described below, contract: Joseph Cotruvo or Craig Vogt, Criteria and Standards Division, Office of Drinking Water, U. S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C., 20016, (202) 382-7575.

Under the Safe Drinking Water Act, the U. S. Environmental Protection Agency is required to publish regulations which apply to public drinking water systems and control specific contaminants which in the Administrator's judgment "may have any adverse effect on the health of persons." Under the Act, ODW must set "recommended maximum contaminant levels" (RMCLs), which are nonenforceable health goals, and "maximum contaminant levels" (MCLs), which are enforceable standards. The RMCLs are to be set at a level where no adverse human health effects are anticipated to occur and an adequate margin of safety must be allowed. The MCLs are set as close to the RMCL as feasible, depending on technical feasibility and cost.

The Office of Drinking Water has scheduled regulatory development in four phases depending upon the type of contaminant:

- Phase 1 - volatile synthetic organic chemicals (VOCs);
- Phase 2 - synthetic organic chemicals (SOCs), inorganic chemicals (IOCs), and microbial contaminants;
- Phase 3 - radionuclides; and
- Phase 4 - disinfectant by-products.

Tables 1 through 3 list chemicals being considered under each of these phases.

In general, the regulatory approach for all phases will be similar. First, an advance notice of proposed rulemaking (ANPRM) will be published, followed by a public comment period. The studies on health effects and frequency of specific constituents in drinking water will be completed and RMCLs will be proposed. A public comment period will follow. Next, RMCLs will be promulgated and MCLs will be proposed. After another comment period, MCLs will be promulgated. Table 4 gives a schedule for these activities.

Preceding page blank

It may be determined that regulations are not warranted for some of the chemicals being studied under each phase. For such chemicals, ODW will provide nonregulatory health guidance to the States or water systems.[1]
